

Ankit Saklani

Software Developer

Delhi, India | saklanis960@gmail.com | LinkedIn

PROFESSIONAL SUMMARY

Software Developer experienced in backend systems, microservices, and RESTful APIs using Golang, Node.js, and Laravel. Skilled in database optimization, distributed caching, and system design, with hands-on experience integrating LLM APIs and building RAG systems using vector databases.

TECHNICAL SKILLS

Languages: Golang, Python, Node.js, JavaScript, SQL, PHP, HTML, CSS

Backend & Frameworks: Microservices Architecture, RESTful APIs, SOAP, FastAPI, Gin, gRPC, Laravel

AI/ML: LLM API Integration (OpenAI, Claude), Retrieval-Augmented Generation (RAG), Vector Databases, Prompt Engineering

Databases: MySQL, PostgreSQL, Redis, MongoDB, Query Optimization, Database Design

DevOps & Tools: Git, CI/CD, Nginx, Linux, Docker, Message Queues, Postman

Core Concepts: System Design, System Architecture, Distributed Systems, Caching Strategies, OOP, Design Patterns

WORK EXPERIENCE

Software Developer

July 2024 – Present

Z1 Tech, Gurugram, India

Architected microservices-based backend systems using Golang and Laravel, improving API response time through Redis caching, connection pooling, and database indexing optimization

Engineered RESTful APIs with JWT authentication, rate limiting, and circuit breakers, achieving high uptime and low-latency performance

Optimized MySQL query performance through strategic indexing, query refactoring, and read replica implementation, reducing database load and improving throughput

Designed and deployed horizontally scalable services with Nginx load balancing and auto-scaling, handling traffic spikes without degradation

Built a distributed caching layer using Redis clustering, reducing database hits and improving overall system performance

Implemented an observability stack with structured logging, metrics collection, and alerting, reducing mean time to resolution (MTTR)

Integrated LLM APIs (OpenAI/Claude) into internal engineering workflows to automate repetitive tasks and improve development efficiency

Collaborated with cross-functional teams, consistently delivering features ahead of schedule through efficient system design and code reviews

Software Developer

January 2024 – March 2024

Ajath Infotech Pvt Ltd, Delhi, India

Developed backend APIs using Node.js and Laravel for web platforms, implementing efficient data serialization to reduce payload size

Integrated payment gateways and real-time notification systems, improving overall user engagement

Software Developer

January 2023 – October 2023

Globiance Intelliweb, Dehradun, India

Built enterprise web applications using Python and PHP/Laravel, implementing role-based access control (RBAC) and session management

Designed an asynchronous task processing system using message queues, improving application responsiveness and user experience

Mentored junior developers on system design, design patterns, and code quality best practices

KEY PROJECTS & ACHIEVEMENTS

RAG-Based Q&A System (Personal Project): Built a Retrieval-Augmented Generation pipeline integrating a vector database for semantic search and context-aware LLM responses

High-Performance Microservices: Designed a distributed architecture in Golang with low-latency performance using Redis clustering and gRPC

Code Quality & Testing: Maintained strong unit and integration test coverage across production services

EDUCATION

Graphic Era Hill University — Master of Computer Applications, 2023

Himalayan Institute of Technology — Bachelor of Computer Application, 2021
